

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	ADVENTIST HEALTH UKIAH VALLEY
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106231396
Report Period:	01/01/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	11/24/2025
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://www.adventisthealth.org/about-us/health-equity

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

40136

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	34317	40136	85.5
Spanish Language	5646	40136	14.1
Asian Pacific Islander Languages	93	40136	0.2
Middle Eastern Languages	11	40136	0.0
American Sign Language	29	40136	0.1
Other Languages	40	40136	0.1

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:
<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

1231

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

1856

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

66.3

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	102	08.3	0	
Housing Instability	111	09.0	0	
Transportation Problems	95	07.7	0	
Utility Difficulties	46	03.7	0	
Interpersonal Safety	9	00.7	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

282

Total number of respondents to HCAHPS Question 19

310

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

91.0

Total number of people surveyed on HCAHPS Question 19

2214

Response rate, or the percentage of people who responded to HCAHPS Question 19

14.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

273

Total number of respondents to HCAHPS Question 17

310

Percentage of respondents who responded "yes" to HCAHPS Question 17

88.1

Total number of people surveyed on HCAHPS Question 17

2214

Response rate, or the percentage of people who responded to HCAHPS Question 17

14.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:
<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

12

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

192

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

62.5

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/>

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

435

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

591

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

73.6

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

277

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

2228

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

12.4

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	2.9	6.0
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	2.9	5.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	6.2	4.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	6.2	4.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Medicaid	5.2	3.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Medicaid	5.2	2.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	2.9	2.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Female	9.5	1.8
CMQCC Exclusive Breast Milk Feeding	Race and/or Ethnicity			White	85.0	1.3
CMQCC Exclusive Breast Milk Feeding	Expected Payor			Private	75.9	1.1

Plan to address disparities identified in the data

To address disparities in all-cause readmissions and exclusive breast milk feeding, Adventist Health Ukiah Valley focuses on strengthening care transitions, improving access to follow-up care, offering culturally responsive education, and tracking readmission and breastfeeding metrics. Priority populations include ages 50-64, 65+, males, American Indian/Alaska Native, Hispanic/Latino, White, Medicare, private payors, and Medicaid-insured patients. Our goals are to reduce readmissions by 10% and improve exclusive breastfeeding rates among Hispanic/Latino and Medicaid-covered births by 10% within 12 months.

Readmission Reduction Strategy

We use the readmission risk score to identify moderate- and high-risk patients before discharge. These patients are scheduled for a follow-up appointment within 10 days, and when no Primary Care Provider (PCP) exists, a hospital follow-up is arranged to prevent care gaps. Enhanced Care Management (ECM) referrals are made based on payer eligibility, with warm handoffs to community care management teams. Palliative care consults are requested for patients with complex needs, advanced illness, or high risk of return.

To improve access, Federally Qualified Health Clinic (FQHC) and Rural Health Clinic (RHC) partners hold dedicated discharge follow-up slots for high-risk patients and those with Social Drivers of Health (SDOH) concerns. Monthly readmission metrics are reviewed by a multidisciplinary committee, with stratification by age, race, sex, payer, and diagnosis to guide targeted interventions.

Exclusive Breastfeeding Equity

To reduce disparities among Hispanic/Latino and Medicaid patients, we have expanded culturally and linguistically responsive lactation support. Several nurses hold or are pursuing International Board Certified Lactation Consultant (IBCLC) certification, including Spanish-speaking staff trained to address cultural bias, breastfeeding barriers, and individualized support needs.

Interventions include bedside lactation support, postpartum follow-up calls within 72 hours, culturally appropriate education, Women Infant Children (WIC) referral, and access to peer counseling, virtual

consults, and outpatient support groups. Breastfeeding rates, stratified by race/ethnicity and payer, are reviewed monthly through the maternal-child multidisciplinary committee to monitor improvement and adjust strategies.

Timeframe Overview

Currently in place: Risk score use, structured post-discharge follow-up scheduling, IBCLC-certified staff support, ECM referrals, and coordination with FQHC/RHC partners including designated discharge follow-up appointment slots.

2022-2023: Strengthen referral workflows, expand lactation support access for Spanish-speaking and Medicaid-insured families, evaluate ECM engagement rates, and track breastfeeding and readmission metrics monthly with stratified equity dashboards.

2024-2025: Enhance warm handoff processes, improve appointment adherence through reminder systems and vendor coordination, streamline multidisciplinary review of SDOH outcomes, and increase IBCLC availability during peak postpartum volumes.

2026-2027: Embed successful strategies into standard workflows, maintain data-driven equity reviews, sustain IBCLC availability, formalize community clinic partnerships, and evaluate long-term impact on readmission reduction and breastfeeding disparities.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Adventist Health Ukiah Valley (AHUV) remains committed to advancing person-centered care by ensuring that every patient's needs, preferences, values, and circumstances are integral to planning, delivery, and coordination of care. Our approach emphasizes dignity, respect, shared decision-making, culturally responsive engagement, and empowerment.

Discharge planning begins at admission. Every patient is screened for risks and barriers that may impact a safe and healthy discharge, including social determinants of health, health literacy, caregiver availability, transportation, housing stability, access to food, medication concerns, and psychosocial needs. These screenings guide our team to proactively identify needs and intervene early.

Discharge planning is a collaborative process that actively includes the patient, family, or caregiver in conversations about goals, capabilities, and preferred settings for recovery. We consistently use open dialogue to honor patient preferences and personal goals, whether related to social support, aftercare services, or end-of-life priorities. Patients are provided clear, understandable information and are asked how they want to participate in their care decisions.

Patients are presented with services and supports available within the community, and their choices drive aftercare and support referrals. This may include home health services, palliative care, Enhanced Care Management (ECM) referral, caregiver training, behavioral health, substance use services, transportation assistance, telehealth support, or community-based organizations. When patients express a preference for a particular provider, service model, or cultural approach, those options are explored and incorporated whenever possible.

Our case managers, nurses, social workers, palliative care, and ECM teams collaborate to develop personalized transition plans that reflect the patient's preferences, risk factors, and available supports. Interpreter services and bilingual staff support communication and cultural alignment.

Shared decision-making tools and plain-language materials are used to ensure understanding and support autonomy.ð

Virtual care and phone outreach are used to support continuity and help patients ask questions and remain engaged post-discharge. For patients facing complex medical or social challenges, palliative care consults, chronic care management, or community health worker support are offered in alignment with patient values and goals.ð

Patients are encouraged to articulate what matters most to them in their recovery— not just medically, but socially, emotionally, and spiritually. This “what matters to me” approach helps foster partnership, trust, and alignment with personal values. Our teams reinforce that patients are not recipients of care but active participants in shaping it.ð

Data on readmissions, referrals, patient experience, and SDOH needs are reviewed monthly to identify gaps and improve person-centered practices. Feedback from patient experience surveys, care transitions reviews, and multidisciplinary committees guide improvement efforts. As part of continuous learning, staff receive education in health equity, trauma-informed care, cultural humility, and motivational interviewing to better support truly person-centered care.ð

Through these efforts, AHUV ensures that person-centered care is not a task but a philosophy that is deeply embedded into how care is planned, delivered, and experienced across all settings.

Patient safety

At Adventist Health Ukiah Valley (AHUV), patient safety extends beyond clinical care to include discharge readiness, behavioral health needs, and social risks that impact safe recovery. Every patient is screened for discharge safety, health literacy, and Social Drivers of Health (SDOH) concerns such as housing, food security, transportation, substance use, and access to follow-up care. These screenings guide referrals to case management, Enhanced Care Management (ECM), social work, addiction medicine, palliative care, home health, or community partners to ensure safe and supported transitions.ð

For patients identified with substance use disorders, we provide safe, respectful, and coordinated support through the Substance Use Navigator (SUN), addiction medicine consults, ECM referrals, behavioral health connections, and follow-up planning before discharge. When appropriate, harm reduction resources and naloxone education are provided to reduce risk post-discharge.ð

Patients experiencing homelessness or housing instability are offered weather-appropriate clothing, a meal, and transportation to their preferred location or community resource. When available, we connect them with shelters, local agencies, and housing support programs. We believe safe discharge also means addressing dignity, warmth, nutrition, and access to basic resources.ð

Discharge planning is collaborative, involving nurses, physicians, case managers, pharmacists, and social workers. Medications are reconciled for accuracy, affordability, and risks, and discharge instructions are provided in plain language and with interpreter support as needed. Teaching focuses on what matters most to the patient and helps ensure they understand symptoms that may require medical attention.ð

Patient safety performance is monitored monthly through multidisciplinary reviews, focusing on readmissions, adverse events, substance use-related safety concerns, Emergency Department (ED) revisits, safe discharge outcomes, and referrals to ECM or community services. These meetings help identify trends and drive improvement.ð

By integrating clinical, behavioral, and social safety approaches, AHUV promotes safe, person-centered transitions and supports equity in patient outcomes.

Addressing patient social drivers of health

Adventist Health Ukiah Valley (AHUV) actively integrates social determinants of health (SDOH) into care planning to improve safe recovery, reduce readmissions, and support whole-person care. Social Drivers of Health (SDOH) are screened at every admission using a standardized assessment that identifies risks related to housing, food insecurity, transportation, behavioral health, medication

access, caregiver support, and financial or insurance barriers.ð

All patients with positive screens receive a social work consult when possible, and Enhanced Care Management (ECM) is engaged for those who meet eligibility criteria. When ECM is activated, a warm handoff is facilitated between the inpatient team and outpatient care management to ensure continuity of care post-discharge. This includes support with appointment scheduling, addressing transportation barriers, connection to primary care, and linkages to community agencies, tribal health partners, Rural Health Clinics (RHCs), and Federally Qualified Health Clinics (FQHCs).ð Care teams collaborate with community-based organizations to help patients access housing resources, addiction recovery programs, food support, transportation vouchers, caregiver services, WIC, and behavioral health care. SDOH needs are incorporated into discharge planning, including assessment of health literacy, medication safety, environmental risk, and post-discharge support needs.ð

Patients who are unhoused are offered weather-appropriate clothing, a meal, and transportation to their preferred location or local support agencies, reinforcing our belief that meeting basic needs is part of patient safety. Interpreter services and bilingual staff help ensure services are culturally responsive and understandable.ð

Monthly multidisciplinary review of SDOH referrals, ECM engagement, and outcomes helps us monitor performance and identify disparities in follow-up, access to resources, and transitions of care. This allows ongoing improvement in how we address social risk to support equitable, person-centered, and safe outcomes.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Adventist Health Ukiah Valley (AHUV) promotes effective treatment by delivering care that is evidence-based, timely, coordinated, and aligned with patient goals. Clinical care follows national standards including Centers for Medicare & Medicaid Services (CMS) Core Measures, California Maternal Quality Care Collaborative (CMQCC), American Heart Association (AHA) stroke guidelines, Sepsis (SEP-1), and Choosing Wisely recommendations. Multidisciplinary rounding ensures treatment plans are reviewed by physicians, nurses, pharmacy, case management, social work, ECM, and palliative care when appropriate. This supports real-time care adjustments and safer transitions.ð

High- and moderate-risk patients are identified using readmission risk scores, and follow-up appointments are scheduled within 7-10 days of discharge whenever possible. If a patient has no Primary Care Provider (PCP), a hospital follow-up is scheduled before discharge to prevent delays in ongoing treatment. Patients who qualify for Enhanced Care Management (ECM) receive warm handoffs to outpatient care teams for better continuity, symptom management, and chronic care support.ð

Effective treatment also includes early use of specialty consults. Palliative care is engaged when patients present with advanced illness, high symptom burden, or multiple readmissions, supporting goal-aligned care and reducing avoidable hospitalizations. Patients with substance use disorders are connected to the Substance Use Navigator, addiction medicine, and behavioral health services before discharge.ð

Medication safety is reinforced through reconciliation, affordability screening, and teach-back education that is culturally appropriate and language-accessible. Discharge plans incorporate Social Drivers of health (SDOH) needs and support referrals for housing, transportation, food access, and behavioral health when needed.ð

Treatment effectiveness is monitored through monthly review of readmissions, SEP-1 compliance,

stroke timelines, sepsis care, and ECM referral outcomes. Metrics are stratified by age, race, sex, and payer to identify variation and drive equity-focused improvement.ð

By combining evidence-based care, risk stratification, specialty engagement, and coordinated follow-up, we support safe, effective, and person-centered treatment for all patients.

Care coordination

At Adventist Health Ukiah Valley (AHUV), care coordination is a central component of safe and effective care delivery. Providers, nursing, case management (CM), social services, and ECM teams work together to ensure seamless transitions from hospital to home, outpatient care, or community services. Care coordination is at the forefront of the treatment team, with providers coordinating with external clinics, specialists, and post-acute facilities, while CM collaborates with home health, Skilled Nursing Facility (SNF), Federally Qualified Health Clinic (FQHC), tribal health, and other service providers.ð

Discharge planning is collaborative and starts early. Follow-up appointments are scheduled before discharge, including hospital follow-ups for patients without a Primary Care Provider (PCP). When eligible, patients are referred to Enhanced Care Management, and warm handoffs are completed to support continuity of care. Medication reconciliation, transportation planning, and clear discharge instructions ensure patients feel supported after leaving the hospital.ð

When patients screen positive for SDOH concerns, coordination between CM and community partners becomes essential. Patients are connected to housing programs, food resources, transportation support, addiction services, behavioral health, and recovery programs. This coordination ensures that patient needs outside the hospital are addressed to support safe recovery and prevent avoidable readmissions.ð

Weekly interdisciplinary rounds allow care teams to review complex needs, discharge readiness, and coordination barriers, supporting real-time problem-solving. Care coordination performance is reviewed monthly through tracking ECM referrals, follow-up completion, readmission trends, and SDOH-related outcomes.ð

By aligning medical care, social services, and community supports, AHUV ensures that patients experience smooth, safe, and patient-centered transitions across the continuum of care.

Access to care

Adventist Health Ukiah Valley (AHUV) supports access to care by ensuring that all patients, regardless of risk level or provider status, are connected to appropriate follow-up services after discharge. We work with a vendor to coordinate appointments for high- and moderate-risk patients, scheduling follow-up visits within recommended timeframes with either primary care or specialists based on attending provider guidance. Low-risk patients also receive appropriate follow-up care or appointments as determined by their provider.ð

For patients without an established Primary Care Provider (PCP), we connect them with local Federally Qualified Health Clinic (FQHCs), rural health clinics, tribal health partners, or telehealth-based providers. These partners hold appointment slots specifically reserved for hospital discharge follow-up, improving timely access and reducing delays. Case management, Enhanced Care Management (ECM), and social work teams help coordinate scheduling, confirm appointments before discharge, and provide support for accessing transportation, insurance resources, or community supports.ð

To address access barriers related to Social Driver of Health (SDOH), patients are screened at admission and referred to housing, food, behavioral health, addiction medicine, or transportation resources when needed. Interpreter services and bilingual staff ensure access to care is equitable for patients with language and literacy needs.ð

Access to care performance is monitored monthly, tracking follow-up appointment completion, readmissions, no-show rates, and SDOH-related referrals. These metrics inform improvements in coordination, provider partnerships, and resource connections.ð

By combining discharge planning, vendor-supported scheduling, community partnerships, and SDOH support, Adventist Health Ukiah Valley promotes timely, equitable, and coordinated access to care for all patients.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
